Subject: Preliminary Results for George AFB - PE sample 

James,

The PE sample has been scored by the QATS lab in Las Vegas (the results were not in my database so I had to ask them to score it this time). The results of the PE scoring is going through a review process but I did receive verbal results.

The results were fine. The Dieldrin results were fine. There were other pests. in the PE sample. The results for those were fine as well with the exception of Heptachlor which was correctly identified but was reported outside acceptance criteria with a low bias.

If you have any questions, call me or e-mail me.

Steve
